Re: International Precast Solutions – River Rouge, Michigan  
– Spray Foaming Roofing System.

Dear Sir;

I would like to take this opportunity to thank Spraytight for all their hard work and efforts here on our site at International Precast Solutions in River Rouge.

As you are well aware the first building constructed on our site was built in 1904. Our facility spans over 350,000 square feet workable space. With this facility being so old there exists many variations of roofs that were adopted through the years from sloped to flat with TPO, Modified Bitumen, conventional built-up roofing systems as well as exposed metal.

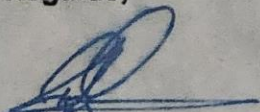

In trying to determine how to address the short term and long-term goals of our roofing requirements we were able to narrow down our expectations to the following;

- 1) Find a system that has the least number of fasteners to the roof substrate.
- 2) Was air-tight thus controlling high energy bills.
- 3) An Insulator enabling us to increase the R-value in the roofs at large.
- 4) Something that could be applied over the existing old roof structure.
- 5) A seal that would incapsulate all the hard to find leaks.

Our research leads us down a path to Spray-foaming as the best solution to meet our needs. With this being said we met with your team that was very knowledgeable with the systems available and what would best service our needs. The approach was second to none especially how they were cognizant to our needs to minimize impacts to our daily production requirements. We were able to work concurrently as a team meeting both our requirements as it related to completing the spray foaming operation with the least amount of impact to IPS' production.

We would highly recommend the staff our Spraytight to handle anyone's Spray Foam needs. Have a wonderful day and should you have any question please do not hesitate to contact me at your earliest convenience.

Regards,

**Renzo Collavino, Vice President**  
International Precast Solutions.
